Dynamic

Development

We are developing a new series of dynamic lights. With our research we are looking for the physical limits of energy savings.

Applications

The innovative light can be used in tunnels, subways, corridors, transits, stations, stairways, garages, at home and many more places.

Contracting

In our project tunnel which we created with the ewz, we are saving 89 % of energy. For further projects we will just charge a part of the energy savings which we achieved.
