1. Januar 2023

98,5% of all buildings already exist!

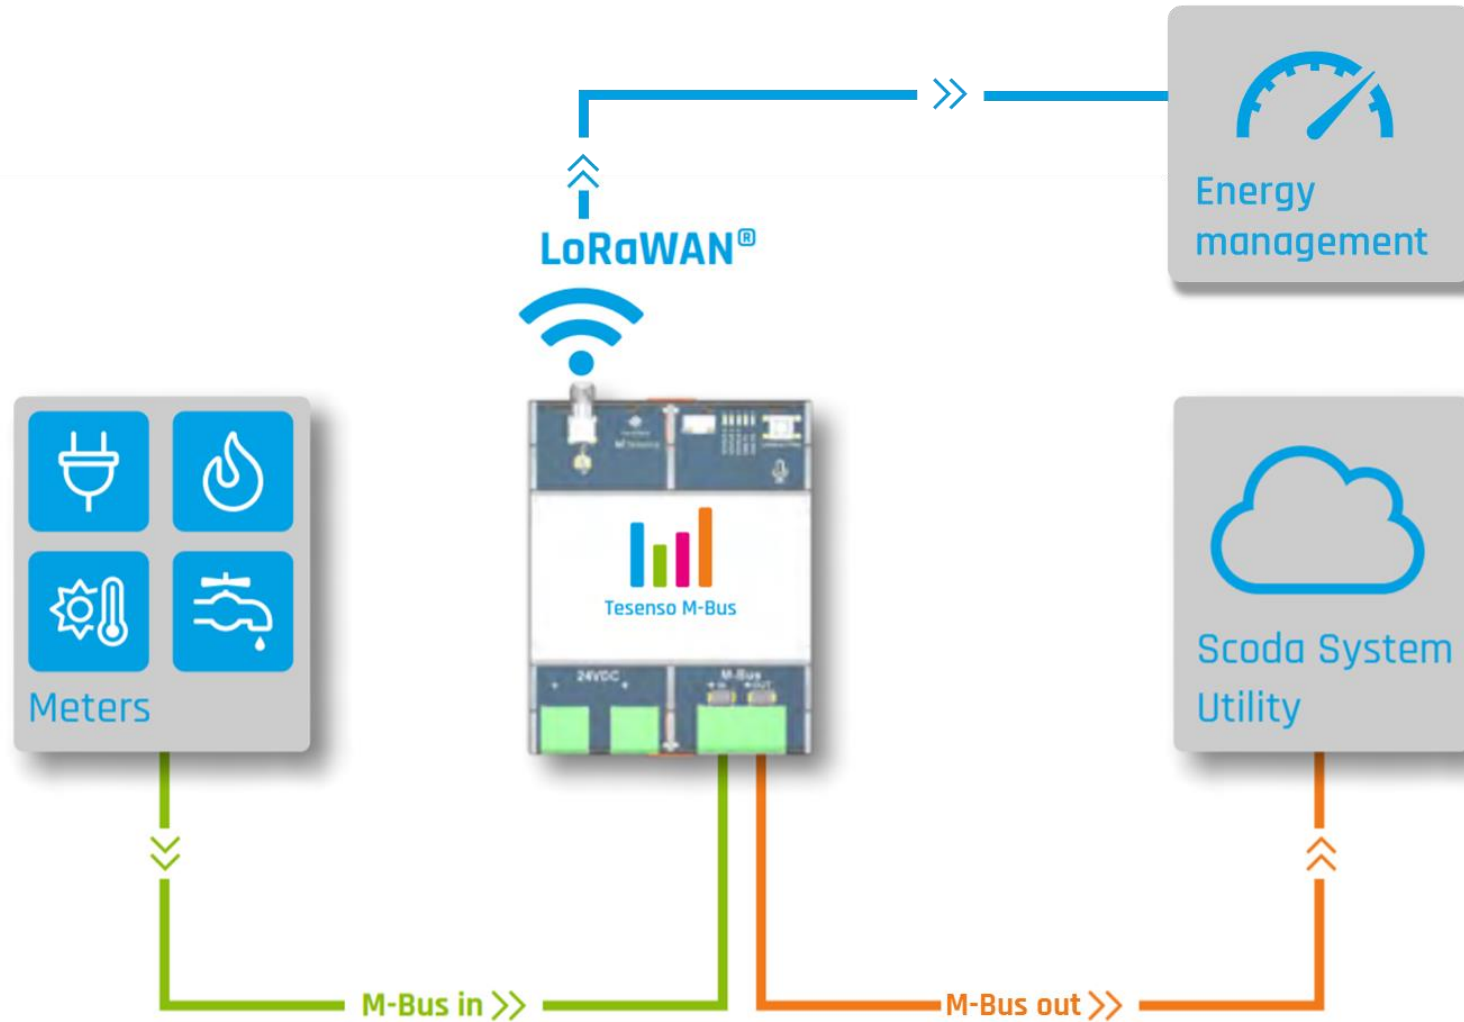

How to make existing buildings ready for Energymanagement and ESG reporting?

Energy- management

- Putting real estate portfolios on the path to CO2 reduction
- Different application levels for different players
 - Portfolio-Benchmarking
 - Asset-Manager
 - Utility and billing
 - Facility-Service-Manager
 - Energy consultant

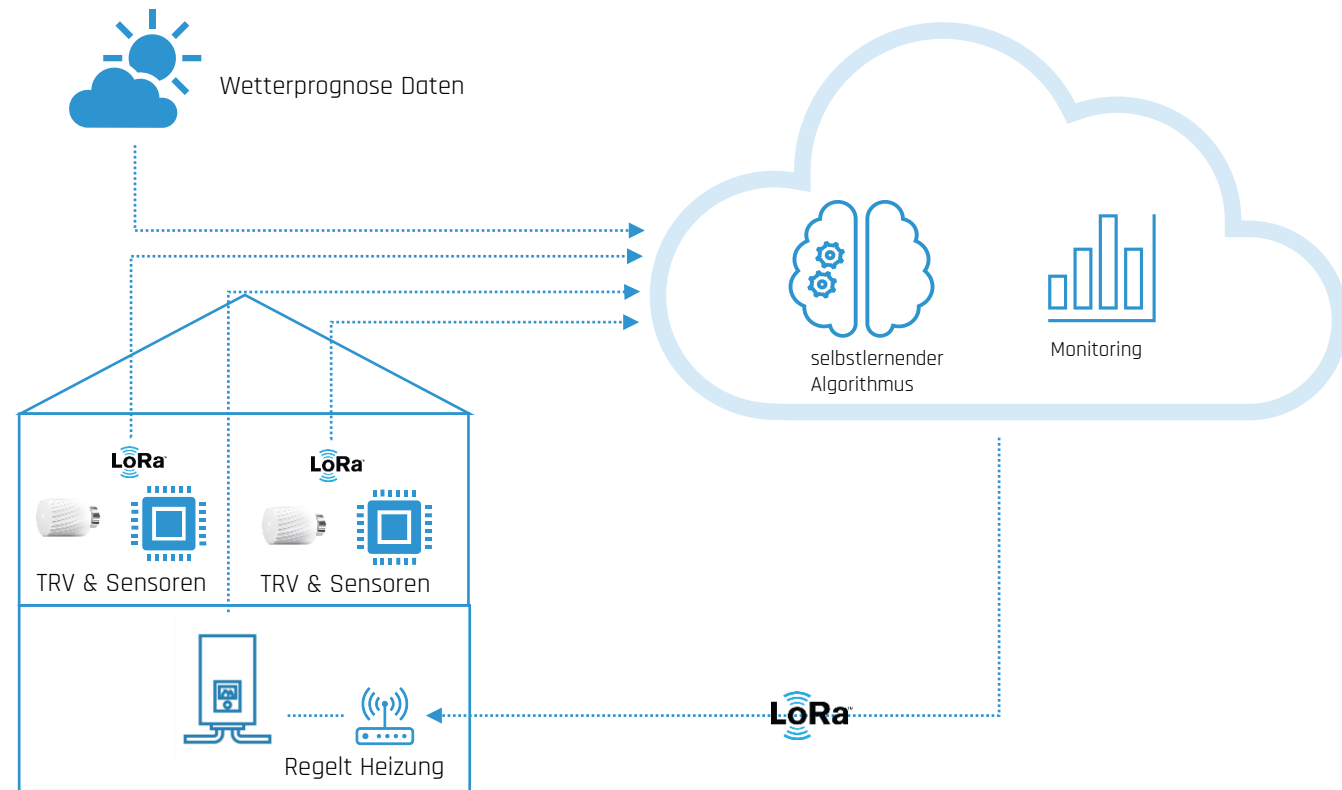

How it works!

Energy optimization

- Improved comfort
- Lower ancillary costs
- Investment security (no more manual optimizations that can be undone during service work, for example).
- Lower CO2 emissions
- Up to 15-30% less heating energy, permanently
- Transparent data basis for complaints enables objectification

Thank you

Energymanagement and ESG reporting
